Army Creek Landfill Phase III - Round Two

December 7, 1976

Ramon G. Lee  
Chief, Water Supply Branch

Al Montague, Army Creek Project Coordinator

The last round of activity related to ground water sampling at Army Creek Landfill included a commitment to schedule an identical second round of Phase III sampling six months later. (memo attached: L. Miller to O. Villa - 10/25/77)

The first round of Phase III sampling took place 10/31/77 which places the second round of sampling at about 4/30/78. To my knowledge, this second round of sampling has not yet taken place.

Is it still the Agency's intent to conduct a second round of sampling? I would be interested to know any future plans for monitoring or resolution of the Army Creek Landfill problem.

AFO Plan of Action - Llangollen Landfill Phase III

October 25, 1977

Larry S. Miller, Chief  
Water Quality Monitoring Branch

Ortario Villa, Director  
Annapolis Field Office

A.F.O.'s "Plan of Action" on Army Creek Landfill (Llangollen) Phase III dated October 21, 1977, has been distributed and seems to meet with everyone's approval. To clarify one item not mentioned in the Actual Plan which Bob Mitkus agreed to in a recent meeting with Al Montague and Ray Lee, we are committed to scheduling an identical second round of this Phase III in six months. Both Al Montague and Bob Mitkus feel that should wrap-up our involvement.

TO: Robert Mitkus (35A00)  
Director, Surveillance & Analysis Division

Based on a request from the Water Supply Branch, the Annapolis Field Office will conduct Phase III sampling at Llangollen Landfill during the week of October 25, 1977. The purpose of the survey is to collect data which can be used to evaluate the possibility of re-opening the Amoco wells for drinking water use.

Four (4) monitoring wells (#22, #25, #42 and #61) and the Artesian Water Company Midvale Well #1 will be sampled for the following compounds:

bis-2(chloroethyl)ether  
benzene  
trichloroethylene  
tetrachloroethylene  
toluene  
1, 2 dichloroethane  
methylene chloride

The monitoring wells will be sampled using submersible pumps. Analysis of the samples is scheduled for completion by November 15, 1977.

AFO Manpower Requirements

- |                                |               |
|--------------------------------|---------------|
| 1. Field preparation time      | 2.0 man days  |
| 2. Laboratory preparation time | .5 man days   |
| 3. Field time                  | 2.0 man days  |
| 4. Laboratory analysis time    | 10.0 man days |
